

HVAC Overview

Rapid Engineering manufactures HVAC systems in sizes ranging from 3,000 to 150,000 CFM.

RAPID™ HVAC Equipment

HVAC designs and manufacturers direct-fired, indirect-fired, electric, steam/hot water HVAC systems. The direct-fired air management systems feature positive building pressurization controlled by a proprietary direct digital controller. In addition, Rapid Engineering also provides traditional controls as well as special needs products for, among others, the automotive, food/pharmaceutical and construction industries.

Rapid Engineering's air management systems are installed worldwide in factories, warehouses, garages, aircraft hangers and large indoor sports arenas. Heated or cooled air can be provided from 3,000 to 150,000 CFM in single units.

Heating and air make-up units for commercial and light industrial warehouse applications are installed nationwide in manufacturing facilities, warehouse-distribution centers, aviator hangers and large commercial kitchens.
