

HVAC Infrared NP-Series Overview

The RAPID™ NP-Series Unitary and Multiburner Negative Pressure Infrared Heater.

A negative pressure system, available in unitary and multiburner systems, the RAPID™ NP heater provides even heat distribution from a vacuum design with uniform tube temperatures and adaptable designs. RAPID™ NP unitary heaters can be interconnected by manifold tube to a pump to form a complete multiburner system. Designs such as straight, u-tube or L configurations, flag layouts, modified in-series units, fork layouts and herringbone configurations can be customized to fit various heating application. CSA design certified. The NP burner has a durable construction. The burner box design includes a protective enclosure allowing minimal heat exposure to valuable electrical controls. The heater has durable components, such as heat-treated aluminized tubing, for longer life. The RAPID™ NP heater is ideal for a variety of applications such as manufacturing areas, warehouses, loading docks, auto body repair shops and more.

Please remember Rapid Engineering offers a variety of other HVAC products and HVAC equipment.
