

Industrial Finishing Custom Finishing Systems Features & Benefits

- Long operational life from industrial-grade materials
- Lower operating costs due to energy efficient components
- Minimum space requirements with optimal design

Options:

- Programmable Logic Controller
- Environmental rooms
- Engineering studies and design analysis
- Install-It-Yourself configurations
- Air-management equipment: 20,000 CFM to 140,000 CFM
- Applications Include:
 - "Wet" or "powder" systems designed to meet your specific product finishing needs
 - Product lines applicable to metal, plastic or wood surfaces
 - Automotive, furniture, aerospace, farm equipment manufacturing and other industries

The Rapid Advantage:

- Project management support
- A single source supply for all components
- Proven track record
- Complete design, manufacturing, installation and service capabilities
- Quality products and reliable performance
- 2D and 3D CAD engineering and design technology
- On-time and on-budget system delivery
