

Industrial Finishing Pre-Treatment Stations Overview

Wash, Rinse and Phosphate - All in One Station!

For metal preparation before powder or wet coatings. Cleans and pretreats assemblies of all shapes and sizes.

RAPID™ Pre-Treatment Stations have the ability to wash, rinse and phosphate all in one station. The pre-treatment station is entirely above ground. Due to the trench free system, it is completely portable and expandable.

It has the ability to clean and pre-treat assemblies of all different shapes and sizes. It is most often used for metal preparation before powder or wet coating. Custom features are available which include an evaporator for "zero-discharge" systems and RO/DI rinse capability.
